

# Martin Debbané

**Martin Debbané** est Professeur Associé en psychologie clinique développementale, à la Faculté de Psychologie et des Sciences de l'Éducation de l'Université de Genève en Suisse. Les travaux de son équipe de recherche visent à intégrer les dimensions développementales, socio-émotionnelles, psycho-dynamiques et neuroscientifiques dans la compréhension de l'émergence des psychopathologies. Il collabore avec le Centre Anna Freud et l'University College London dans le développement des thérapies basées sur la mentalisation.

- Best Poster Prize, Thirteenth Biennial Winter Workshop on Schizophrenia Research, 4-10 February 2006, Davos, Switzerland.
- Young Investigator Fellowship, Eleventh Annual Wisconsin Symposium on Emotion, 7-8 April 2005, Madison, Wisconsin, USA.

**Professor Martin Debbané** is a Senior Lecturer at the Research Department of Clinical, Educational, and Health Psychology, University College London (UK). He is also Associate Professor and director of the Developmental Clinical Psychology Research Unit at the Faculty of Psychology and Educational Sciences, University of Geneva (Switzerland).

His research activities focus on developmental psychopathology, examining the developmental roots of severe disorders in the psychosis or personality spectrum disorders. The scientific projects involve a number of different methodologies, including but not restricted to clinical measures and cognitive paradigms, as well as structural and functional neuroimaging. He is involved in a number of longitudinal projects following youth cohorts with clinical risk (schizotypy, borderline or antisocial traits) or genetic risk (22q11.2 Deletion syndrome) for severe psychopathology.

He is a trained and licensed child and adolescent psychodynamic psychotherapist. He acts as associate and trainer in mentalization-based therapies at the Anna Freud Centre in London. He teaches and practices psychotherapy, from a contemporary psychodynamic perspective.
